

AGRISOMPO

NORTH AMERICA

2023

**VIRTUAL
CROP TOUR**

July 28, 2023

AgriSompo North America, Inc. is an Equal Opportunity Provider.

WHITSITT FARMS, LLC

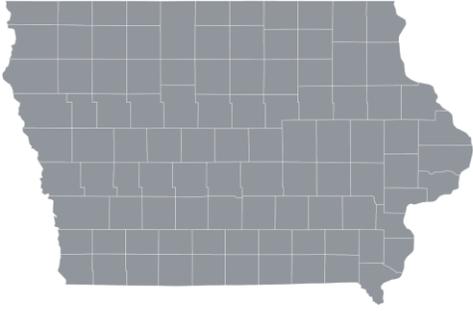

Illinois

- We finally had one nice rain since the last VCT; however, we have now gone 13 days without moisture and we are now experiencing excessive heat.
- It is hard to believe how hardy some of these hybrids appear in these conditions. At this point, we will be a minimum of 40 bpa less than last year on corn.
- The area's late-planted corn is just now pollinating in some challenging heat.
- It feels like we are losing soybean yield at this point as well. Late rains can still help.

VIRTUAL CROP TOUR

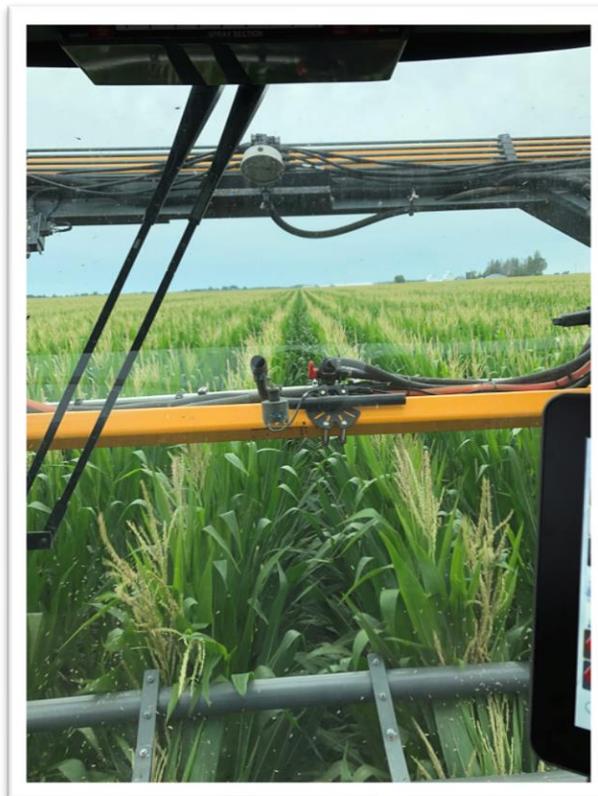

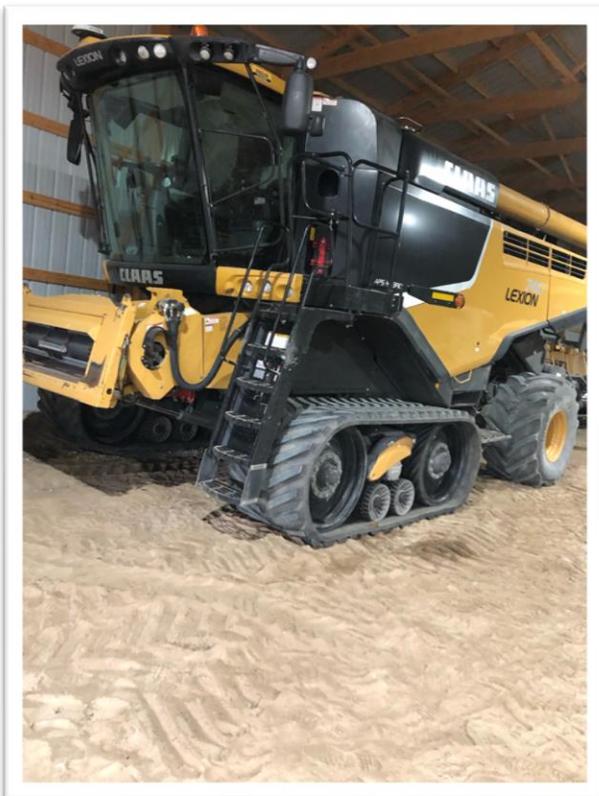

GRETTER FARMS

Iowa

- The heat wave has found Iowa! Temperatures in the mid-to-upper-90s are here and forecasted for the next few days
- We finished corn and soybean fungicide application over the past couple of weeks.
- Prospects are still good for a solid crop.
- Our “new to us” combine arrived; hopefully we can run a lot of bushels through it this fall!

VIRTUAL CROP TOUR

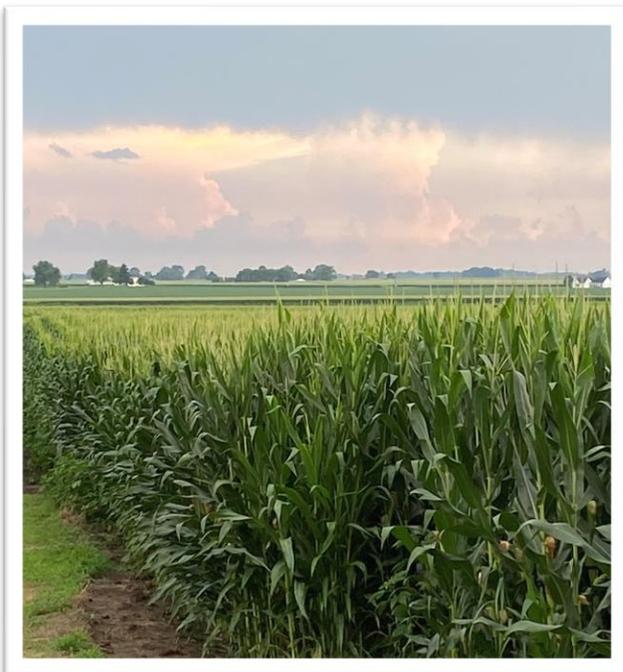

VALLERY FARMS, LLC

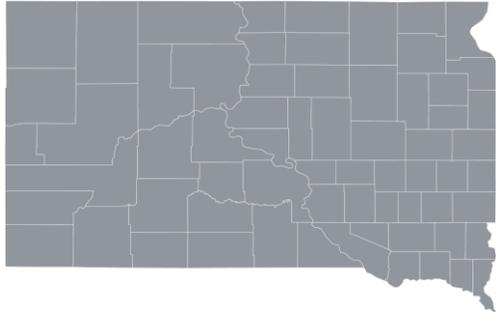

Ohio

- The rains have continued to fall in a lot of southeastern Ohio; some areas have had up to 9" this week.
- There will be a few prevented planting double-crop soybean claims due to excess moisture.
- For the most part the “rain makes grain” statement will hold true for corn.
- Soybeans are setting pods and most look good.

VIRTUAL CROP TOUR

GREG JANISCH FARMS

South Dakota

- HOT in South Dakota, in the upper-90s. Thankfully we have moisture!
- Pictured below is my last-planted corn. It was no-tilled on May 17.
- The wheat that was so short early has a new life. In fact, we now have green heads coming up amongst the mature heads!
- With the corn and soybeans looking good, we decided to go fishing and figure out how to deal with these green heads in the wheat later!
